

Hackathon Project Phases Template that ensures students can complete it efficiently while covering all six phases. The template is structured to capture essential information without being time-consuming.

Hackathon Project Phases Template

Project Title:

GenLogo

Team Name:

Visioneers

Team Members:

S.mastanamma

T.V.N.Niveditha

T.Pramodini

Phase-1: Brainstorming & Ideation

Objective:

The objective of logo design is to create a unique and memorable visual identity for a brand.

Key Points:

1. Problem Statement: Creating a unique visual identity for the Innovator brand.
 2. Proposed Solution: Designing a logo that represents innovation, creativity, and forwardthinking.
 3. Target Users: Innovators, entrepreneurs, and businesses looking to establish a strong brand identity.
 4. Expected Outcome: Establishing Innovator as a thought leader and pioneer in its industry.
-

Phase-2: Requirement Analysis

Objective:

Technical Requirements:

1. Design Software: Adobe Creative Cloud (Illustrator, Photoshop) or Figma.
2. File Formats: AI, EPS, PNG, JPEG, SVG.
3. Color Mode: CMYK and RGB.

Functional Requirements:

1. Logo Design: A unique and memorable logo that represents innovation, creativity, and forward-thinking.
2. Color Scheme: A bold and vibrant color scheme that reflects the brand's values and mission.
3. Typography: A clean and modern typography that reflects the brand's forward-thinking approach.
4. Imagery: Imagery that represents innovation, such as lightbulbs, gears, or other creative elements.
5. Style Guide: A comprehensive style guide outlining the usage of the logo, color palette, typography, and imagery.
6. Icon-only Logo: An icon-only version of the logo for use on social media profiles, app icons, etc.
7. Reversed Logo: A reversed version of the logo for use on dark backgrounds.

Key Points:

Technical Requirements:

1. Adobe Creative Cloud (Illustrator, Photoshop)
2. Figma
3. Design software plugins (e.g. Sketch, InVision)

Functional Requirements:

1. Unique logo design
2. Color scheme and typography
3. Imagery representing innovation
4. Style guide
5. Icon-only logo
6. Reversed logo

Constraints & Challenges:

1. Tight deadline
 2. Limited design resources
 3. Ensuring scalability and versatility
 4. Meeting client expectations
 5. Potential design revisions
-

Phase-3: Project Design

Objective:

Architecture

Key Points:

System Architecture:

1. User Interface (UI): Built using React, HTML5, CSS3, and JavaScript
2. Design Tool: Integrated design tool using Adobe Creative Cloud APIs or Figma APIs
3. Application Server: Built using Node.js, Express.js, and MongoDB

User Flow:

1. Landing Page: User visits the Logo Innovator website.
2. Sign Up/Login: User creates an account or logs in.
3. Design Brief: User fills out a questionnaire.
4. Design Concepts: The application generates design concepts.
5. Customization: User customizes their preferred design concept.

Technical Requirements:

1. Frontend: Built using React, HTML5, CSS3, and JavaScript.
 2. Backend: Built using Node.js, Express.js, and MongoDB.
 3. Design Tool: Integrated design tool using Adobe Creative Cloud APIs or Figma APIs.
-

Phase-4: Project Planning (Agile Methodologies)

Objective:

Here's a breakdown of the tasks for the Logo Innovator project using Agile methodologies:

Key Points:

Sprint Planning:

Sprint 1: Planning and Setup

1. Define project scope and goals
2. Identify target audience and user personas
3. Determine technical requirements and infrastructure needs
4. Set up project management tools and version control
5. Create a product backlog and prioritize features

Sprint 2: Design and Prototyping

1. Develop a wireframe and user flow diagram
2. Create a visual design concept and mockups
3. Develop a functional prototype
4. Conduct usability testing and gather feedback

5. Refine the design and prototype based on feedback

Sprint 3: Frontend Development

1. Develop the frontend using React, HTML5, CSS3, and JavaScript
2. Implement the design and prototype
3. Develop the user interface components
4. Implement responsive design and accessibility features
5. Conduct unit testing and integration testing

Sprint 4: Backend Development

1. Develop the backend using Node.js, Express.js, and MongoDB
2. Implement the design tool integration using Adobe Creative Cloud APIs or Figma APIs
3. Develop the payment gateway integration using Stripe or PayPal
4. Implement user authentication and authorization
5. Conduct unit testing and integration testing

Sprint 5: Testing and Deployment

1. Conduct system testing and integration testing
2. Identify and fix bugs
3. Deploy the application to production
4. Conduct user acceptance testing (UAT)
5. Gather feedback and iterate on the application

Sprint 6: Maintenance and Iteration

1. Monitor application performance and fix issues
2. Gather user feedback and iterate on the application

3. Add new features and functionality
4. Conduct regular security audits and updates
5. Continuously improve the application and user experience

Phase-5: Project Development

Objective:

Here is a high level example of how the Logo Innovator project could be coded and integrated

Key Points:

Technology Stack:

1. **Frontend:** React, html, css
2. **Backend:** node.js, mongodb
3. **Programming Language:** python

Development process:.

1. Planning and Research.
2. Design and prototyping
3. FrontEnd Development
4. Backend development

Challenges and Risks:

1. complex design requirements
2. user interfaces issues

Phase-6: Functional and Performance Testing

Objective:

To ensure the Logo Innovator project works as expected, we'll conduct thorough testing and quality assurance.

Key Points:

Test Cases Executed

1. **Design Brief Test Cases:** Valid design brief submission, invalid design brief submission, design brief field validation.
2. **Design Concepts Test Cases:** Design concepts generation, design concepts display, design concepts filtering.
3. **Customization Test Cases:** Customization options, customization validation, customized design concept display.
4. **Payment Gateway Test Cases:** Payment gateway integration, payment processing, payment error handling.
5. **Design Download Test Cases:** Design file generation, design file download, design file integrity.

6. User Dashboard Test Cases: User dashboard display, design history display, dashboard navigation.
7. Security Test Cases: User authentication, authorization, data encryption.
8. Performance Test Cases: System responsiveness, design concept generation performance, payment processing performance.

Bug Fixes & Improvements

1. Fixed: Design brief submission issue.
2. Fixed: Design concepts filtering issue.
3. Improved: Customization options UI.
4. Improved: Payment processing error handling.
5. Improved: Design file download performance.

Final Validation

1. Validation: Conducted thorough testing of all features.
2. Validation: Verified bug fixes and improvements.
3. Validation: Ensured system meets requirements.

Deployment (if applicable)

1. Deployment: Deployed to production environment.
2. Deployment: Configured payment gateway and design tool integrations.
3. Deployment: Conducted post-deployment testing.

Final Submission

1. **Project Report Based on the templates**
 2. **Demo Video (3-5 Minutes)**
 3. **GitHub/Code Repository Link**
 4. **Presentation**
-
